

## **Michael Klinkman, MD**

Michael Klinkman, MD is a professor in the University of Michigan Department of Family Medicine. He is also a practicing family physician and serves as the first Director of Primary Care Programs for the University of Michigan Depression Center. He also created the Depression Center's Primary Care Research Network.

Dr. Klinkman has led or co-led work on the development of scalable health information technology solutions for primary and community care, ranging from theoretical work to design and testing of software applications for use in primary care and behavioral health settings. His department team developed and licensed ClinfoTracker, a clinical quality management application. For the Depression Center, he led development of the MDOCC Clinical Record, a multipurpose software application supporting behavioral health care management workflow and outcomes measurement.

In his role as Medical Director for the Jackson Health Network, Dr. Klinkman led work to build an integrated care management software application into the Jackson Community Medical Record. This embedded application supported care coordination across a complex distributed clinical environment, and enabled measurement-based care (comprehensive case-finding, remote patient monitoring and feedback).

Dr. Klinkman received his MD from the University of Michigan Medical School.
